# PeriGen, Inc.
# Business Continuity Plan (BCP)

## Version Information & Changes

Any changes, edits and updates made to the BCP will be recorded in here. It is the responsibility of the COO to ensure that all existing copies of the BCP are up to date. Whenever there is an update to the BCP, PeriGen requires that the version number be updated.

| Simi Nitzan Tzidkiyahu | Dir. Finance & Administration | Azrieli Rishonim \| 2 Nim Blvd, Rishon LeZion 7546302, Israel | Simi.nitzan@perigen.com | 972-3-9059904<br>972-54-3005176 |

# III. BCP Corporate Policy

PeriGen's primary objectives are to continue providing services to our customers, protect the health and safety of our employees, and fulfill our legal and regulatory obligations. The primary services that PeriGen delivers are:

- Customer Support Services

- Product Maintenance
- Employee Payroll
- Regulatory Compliance

### A. Significant Business Disruptions (SBDs)

An SBD may affect only one campus (*e.g.*, a fire in the office building or inclement weather) or may be widespread affecting several campuses (*e.g.*, a terrorist attack, a natural disaster, or a pandemic). Physical access to local PeriGen campuses does not impact the ability for PeriGen to deliver services. PeriGen's services are primarily internet based. As a result, widespread disruptions in internet access over larges areas (local to PeriGen offices, local to PeriGen's employee residences or customer locations) will impact the ability for PeriGen to provide many contacted services.

### B. Plan Approval and Annual Reviews

Brian Bishop, Chief Operating Officer, registered principal and member of PeriGen's senior management, is responsible for approving the plan and conducting annual reviews of the plan.

### C. Plan Location and Access

The BCP will be store in PeriGen's approved secure document management system, M-Files. This cloud-base system captures all historical revisions and approval signatures. The system is role-based to protect the integrity of documents and is centrally available to all PeriGen employees.

## IV. Business Description

PeriGen is a software medical device manufacturing company headquartered in Cary, NC with an office inTel Aviv, Israel. PeriGen conducts business primarily in the United States with a small footprint of customers in Canada.

PeriGen's obligated services are:

- Customer Support Services
- Product Maintenance
- Employee Payroll
- Regulatory Compliance

## V. Office Locations

### A. PeriGen Headquarters Cary, NC

100 Regency Forest Dr. Cary, NC 27518
This location serves as the corporate headquarters for the business. All aspects of the company's business are conducted from this office: Sales, Marketing, Finance, Customer Support, Product Development, IT Management, Quality & Regulatory Functions, and Administration.

### B. PeriGen Solutions Ltd. – Rishon LeZion, Israel

Azrieli Rishonim | 2 Nim Blvd, Rishon LeZion 7546302, Israel
This location performs sustaining and new product development for PeriGen's software products, Quality & Regulatory functions, and Finance for the Israeli office.

## VI. Office Closure Process

The decision to close the office will be made by the local team's leadership and based on the conditions at the local campus.

- Natan Blanks, GM Israeli Operations is responsible for declaring and communicating the operational status of the Rishon LeZion office.
- Ed Thompson, CFO, is responsible for declaring and communicating the operational status of the Cary office.

See Inclement Weather and Emergency Closures section in the Employee Handbook for communicating office status to PeriGen's US staff. Israel maintains a WhatsApp group that is used for such group communications.

## VII. Primary Services Recovery

In the event of an SBD impacting our ability to operate in a location, staff in the affected office(s) will work from their home residences. Communication amongst the team and in between departments are performed via mobile phone, Teams and Zoom technologies

### Customer Support

The customer support team provides 24/7 support to PeriGen's customers. In the event of an SBD, the Director of Customer Services will notify the customer support team of the event and instruct the team members to work from home. The call intake system, Ring Central, supports both onsite and remote operation without changes to the system.

All cases are managed in PeriGen's case management system, Microsoft CRM. This system is accessible via the internet from inside or outside office locations.

## Research and Development

The R&D team sustains existing product code and create new products. Most all aspects of this work can be performed remotely from the office. All source code is managed in a cloud-based solution, Microsoft DevOps. The majority of testing is performed without the need of physical devices located in an office environment. In the event those devices are destroyed in an SBD, replacement devices will be procured to prevent disruption to R&D's obligated services.

Israel's R&D requires access to workstations and servers physically located in the Israel office for development and testing. In the event that those devices are destroyed in an SBD, replacement devices will be procured, and the critical contents recovered according to the DRP, to prevent disruption to R&D's obligated services.

## Regulatory Compliance

PeriGen's quality and regulatory team is responsible for reviewing and maintaining the quality records of our quality system. All management of these records are performed electronically. As a result, compliance can be measured and managed outside the office. PeriGen's secure document management system, M-Files, provide access and management functions to these records.

## Finance and Accounting

PeriGen's finance and accounting functions are performed electronically via cloud-based systems; NetSuite, UKG, Empower, Office 365, etc. As a result, financial obligations can be performed securely onsite or offsite.

The Israel office's finance and accounting are performed on systems running on servers physically located in the Israel office. In the event that those devices are destroyed in an SBD, replacement devices will be procured, and the critical contents recovered according to the DRP, to prevent disruption to R&D's obligated services.

## Other Functions

PeriGen's other functions, Sales/Marketing and Product Implementation are primarily performed remotely. These tasks are executed by staff distributed throughout the United States. There are no special considerations needed for these teams to continue functioning through an SBD event that impacts a PeriGen campus. Large scale regional internet or power outages would impact their ability to operate. Local utility and governmental resources will be relied on to restore the basic services.

## VIII. Disaster Recovery Plan

See GW-WI-002 for DRP

## IX. Inventory Management

PeriGen receives, stores, and ships a small set of hardware materials from the Cary, NC office. Shipping and receiving tasks occur a few times a month on average. However, there can be heavy shipment peaks at times. In the event of an SBD which prevents access to PeriGen's inventory, a secondary, temperature controlled, offsite location will be used to transfer existing inventory, receive materials, and ship materials. The offsite storage site is located at:

Public Storage
2317 SW Cary Parkway
Unit #1215
Cary, NC 27511
